Quote

“ Take the law’s Accountable Care Organizations (ACOs). These integrated networks of health care providers are supposed to improve the coordination of Medicare patients’ care by bringing multiple doctors under one roof. Improved communication among doctors should lead to less waste and lower costs — or so the theory goes. But according to the Cleveland Clinic — one of the health systems that inspired the ACOs — the administration’s rules are “replete with prescriptive requirements that have little to do with outcomes” and “detailed governance and reporting requirements that create significant administrative burdens.”

”
